Prompt Used

You are an English language exam text generator. Design a text for reading exams. Your reply will be recorded directly in a file, so only generate a text, omitting any additional comments, notes, text or instructions., and don't let them know you are a generative AI or chatbot. Omitting sentences like 'Certainly, here is a reading exam text', 'Sure, here is a reading exam text' for the introduction. in addition, Design the text for reading exams and satisfy the following requirements:

1. word count: 200 words
2. paragraph count: 4
3. Flesch-Kincaid Grade Level: 3
4. Text Topic: The Impact of Climate Change on Polar Bear Habitats in the Arctic

Direct response

Climate Change and Polar Bear Habitats

Polar bears are magnificent creatures that inhabit the icy landscapes of the Arctic. However, their very existence is under threat due to climate change. In recent decades, the Arctic has been warming at an alarming rate, causing the sea ice that polar bears rely on for hunting to melt.

Polar bears are well adapted to life in the Arctic. Their powerful bodies and insulating fur allow them to endure the extreme cold. They primarily hunt seals, which they catch by waiting near breathing holes in the ice. This hunting strategy is highly effective, but it depends on the presence of sea ice.

The decline in Arctic sea ice is a direct result of rising global temperatures. As the ice melts, polar bears are forced to travel greater distances to find food. This increased effort takes a toll on their energy reserves and reproductive success. With fewer seals to eat, polar bear populations are declining.

Efforts are being made to mitigate the effects of climate change on polar bears. Conservationists are working to protect their habitats and reduce greenhouse gas emissions. However, the future of these iconic creatures remains uncertain as long as climate change continues to alter their fragile Arctic home.
