

# Text 017 - Started Testing for Accuracy in Language Difficulty Levels

## Test Purpose

Receiving feedback that GPT is not very sensitive to the difficulty level expressed by numbers, we aim to make texts match the difficulty level more accurately by using words to convey the intended level.

## Prompt Used

Generate 6 paragraphs with a title. Strictly follow the paragraph count.

Design a text for English reading exams.

Your reply will be recorded directly in a file, so only generate a text, omitting any additional comments, notes, text or instructions., and don't let them know you are a generative AI or chatbot.

Omitting sentences like 'Certainly, here is a reading exam text', 'Sure, here is a reading exam text' for the introduction.

In addition, your result should strictly follow the following requirements:

Word count: 500

Difficulty Level: kindergarten

## Direct response

Text Topic: The Impact of Climate Change on Polar Bear Habitats in the Arctic

Title: The Impact of Climate Change on Polar Bear Habitats in the Arctic

Polar bears live in the Arctic, where it is very cold. They have thick fur to keep them warm, and they are excellent swimmers. But something is happening in the Arctic that is not good for polar bears. It's called climate change. Climate change means the Earth's temperature is getting warmer. This is making the Arctic ice melt. Polar bears need the ice to hunt for their favorite food, seals. When the ice melts, it's harder for them to find food.

Polar bears are big and strong, but they are also very gentle. They are not like other bears that live in the forest. They are white, which helps them blend in with the snow and ice. But as the ice melts, they have to travel farther to find food. This can be very tiring for them. Climate change is making it harder for polar bears to survive.

We can help polar bears by using less energy and reducing pollution. When we use less energy, we produce fewer gases that make the Earth warmer. This can slow down climate change. We can also learn more about polar bears and their habitat to protect them better. It's important to take care of our planet so that polar bears and other animals can continue to live in the Arctic.
